

- We put this car inside a cold chamber to show you how Texaco's anti-freeze and coolant can help protect your car against freeze ups as well as rust and corrosion all year long.

Driver: I didn't know you guys were going to come formal.

- We left the car here for 12 hours at 30 below zero. Now a frozen cooling system can mean costly repair bills. But with Texaco's anti-freeze and coolant you don't have to worry. Okay. Start her up. For test purposes we modified the cooling system slightly so you can immediately see it didn't freeze up, even at 30 below. No other anti-freeze of this type protects better against freeze ups. Hey, we just got the seal of approval. So have your independent Texaco retailer install Texaco's anti-freeze and coolant now. (bright music)
